

Produktblad sE Electronics V-CLAMP

sE Electronics V-CLAMP The perfectly compact companion for all your drum mic mounting needs.

When used as designed, the V CLAMP makes your V BEAT snare & tom mics even more compact, and even more flexible. The V CLAMP adds another axis of vertical movement for even better fine-positioning ability, and keeps the V BEAT securely fastened to your drum rim while adding barely any bulk to the overall footprint.

Produktblad sE Electronics V-BEAT

sE Electronics V-BEAT Snare / Tom mic - Effortless sonics, superior isolation, minimal footprint.

Effortlessly amazing sound for any snare or tom drum. The V-BEAT is the most compact drum microphone in its class, intended for use with snare or tom drums. Unlike the V7, which is optimized for vocals, the V-BEAT features the same high-grade sonic performance as the V7 X instrument dynamic, but in a dedicated low-profile & drum-friendly form factor. Tuned for instrumental use, it can also be used on sources such as electric guitar speaker cabinets or brass instruments. Its specialized capsule provides a highly detailed, extremely natural sound character on snares or toms of any size, with amazing off-axis rejection to minimize bleed from nearby drums and cymbals. Its ultra-compact design and parallel XLR connector & stand mount give it the smallest footprint in its class, and its rock-solid swivel mount allows its angle to be adjusted with great precision – so it can be aimed at almost any part of the drum head to achieve whatever sound character is required. Compact, flexible, and minimalist design. The V-BEAT utilizes an extremely low-profile mechanical design, with the XLR connector and stand mount integrated in parallel on the underside of the flexible swivel mount. This minimizes the V-BEAT's footprint, removes any cables from line-of-sight, and negates the need for any right-angle adapters or special cables. It also means there's no danger of cables interfering with the drummer's performance, as they are kept out of the way of cymbals and drum sticks alike. When used as intended with the V-CLAMP, the V-BEAT becomes even more compact and even more flexible. The V-CLAMP adds another axis of vertical movement for even better fine-positioning ability, and keeps the V-BEAT securely fastened to your drum rim while adding barely any bulk to the overall footprint. The heart of the V-BEAT: the DMC7 X capsule. The custom DMC7 X capsule offers the same technologies and features as its sibling within the acclaimed V7, including the innovative, specialized aluminum voice coil. While the V7 is optimized for vocals, the capsule in the V-BEAT has been custom-tuned for instrumental use. With aluminum being a much lighter material than the industry standard (copper), it delivers an open and transient-rich sound, with deep and clear lows for stellar performance. The midrange is also extremely balanced, supporting the natural resonances of percussive instruments. The excellent off-axis rejection of this sophisticated capsule also helps isolate your drums from other sound sources on the stage - efficiently reducing stage bleed and spill from other drums, cymbals and more. The supercardioid pattern also allows you to easily tailor the bottom-end by adjusting the proximity effect – i.e. distance to the drum

head. Proven Neodymium magnets, tight production tolerances and high workmanship ensure excellent sensitivity, high-end sound quality and superb consistency. Unique, patented integrated capsule suspension The V BEAT's advanced internal capsule suspension efficiently decouples the capsule from mechanical vibration, isolating it from shocks & jolts and eliminating the need for an external shock mount. All-metal housing & spring steel grille with gold XLR connector The V BEAT's road-ready chassis is all metal, with no fragile plastic parts. The chassis' high quality, highly durable die-cast zinc alloy is designed to hold up under on-stage stress for years, the spring steel mesh grille is dent-proof and corrosion-free for perfect reliability, and the tightening knob for the swivel mount maintains a rock-solid hold on the V BEAT in any position. Plus, the V BEAT's gold-plated XLR connector ensures a loss-free and reliable signal connection for years to come. Internal windscreen The red internal windscreen efficiently reduces unwanted popping, plosives and wind noise - and in case you prefer a more visually subtle black windscreen, we have also included one as a standard accessory. IN THE BOX thread adapter zipper pouch spare black internal windscreen sE logo sticker user manual knurled nut for 3rd part accessories

SPECIFICATIONS Capsule: Dynamic Voice Coil: Aluminum Magnet: Neodymium Directional Pattern: Supercardioid Frequency range: 30 Hz - 19 kHz Impedance: 300 Ohms Sensitivity: 2.0 mV/Pa (-54 dBV) Connectivity: 3-pin male XLR Height: 61 mm (2.4 in.) x Length: 110 mm (4.3 in.) Weight: 347 g

Produktblad sE Electronics V-KICK

sE Electronics V-KICK Unbeatable punch & impact, with four custom voicings to cover any sonic need

From big band to metalcore, the V KICK has got you covered. The V KICK is the most compact and versatile drum microphone in its class, intended for use with kick (bass) drums and other sources such as miking bass guitar speaker cabinets, floor toms or other large drums where low-frequency energy is of the utmost importance. Its integrated swivel joint allows for any required mic placement, and its specialized capsule provides a sound character tailored specifically for kick drums, which can be further shaped with the use of two switches on the rear side of the microphone. From warm and classic to modern and aggressive, the V KICK gives you any kick drum sound you need. From classic to modern: Four switchable sonic voicings Two switches on the rear side of the V KICK allow you four different sound settings, great for tailoring the sound for your specific project - and ideal for live shows with multiple bands and short changeovers. And since they're on the back of the mic, these switches are still accessible even if the V KICK is placed inside a kick drum. The most compact kick drum mic on the market The V KICK's extremely low profile allows for effortless placement outside or inside a kick drum, and its integrated swivel joint allows for easy positioning inside (through the drum head port) or outside the kick drum. And with the stand mount and the XLR connector mounted side-by-side in parallel on the underside of the mic, your mic cables stay flush with the mic stand - no cable clutter, completely

minimal footprint, and easy to place anywhere. The heart of the V KICK: the DMC7 SB capsule. The all-new custom DMC7 SB capsule offers the same technologies and features as its siblings within the acclaimed V7 and V7 X, including the innovative, specialized aluminum voice coil. While the V7 X is optimized for most other instruments, the capsule in the V KICK has been custom-tuned for the very lowest and loudest tones. With aluminum being a much lighter material than the industry standard (copper), it delivers an open and transient-rich sound, with effortless capture of low frequency energy and punch. The midrange is also extremely balanced, supporting the natural resonances of percussive instruments. The excellent off-axis rejection of this sophisticated capsule also helps isolate your kick drum from other sound sources on the stage - efficiently reducing stage bleed and spill from snare, toms, hi-hat and more. The supercardioid pattern also allows you to easily tailor the bottom-end by adjusting the proximity effect - i.e. distance to the sound source. Proven Neodymium magnets, tight production tolerances and high workmanship ensure excellent sensitivity, high-end sound quality and superb consistency. Unique, patented integrated capsule suspension. The V KICK's advanced internal capsule suspension efficiently decouples the capsule from mechanical vibration, isolating it from shocks & jolts and eliminating the need for an external shock mount.
