ATTERO TECH A4FLEX AES67 scalable mic/line connectivity interface

I/O solutions provide simple integration into any venue or application for quick audio bridging to and from a Dante or AES67 network – available in wallplate and flange-mount form factors.

A4 FLEX features four mic/line inputs (two of which are software-configurable as outputs), USB and AES67 audio and control interfaces, logic I/O and a two-channel power amplifier. The Axon A4FLEX is equally suited to act as a standalone integration solution for the huddle space, small conference room or network audio I/O endpoint for a networked AV&C system in a wide range of applications. QSC has developed a Q-SYS control plugin that offers simple integration into the Q-SYS Ecosystem, without the need for any programming.
