

Produktblad sE Electronics RF Space

sE Electronics RF Space Full-bandwidth absorption, isolation, and diffusion to help you gain control over your acoustic environment.

With a larger surface area, enhancement of sE's™ patented multi-layer technology, deeper air gaps, and more efficient materials, the SPACE offers great full-bandwidth absorption, isolation, and diffusion to help you gain control over your acoustic environment. Larger than our industry-standard RF Pro and entry-level RF-X, the added size also makes the SPACE filter perfectly suited for larger microphones. Each SPACE filter is hand-built by our team at the sE factory - not mass-produced by an army of machines - and made to last for years and years of recording. Specialized mounting hardware allows the SPACE to be easily mounted on any microphone stand or drum hardware, with a full range of motion - adjustable and lockable horizontally, vertically, and tilted at any angle. This makes the SPACE utterly stable and effective in any recording environment. The SPACE also utilizes our most advanced patented multi-layer technologies to create a balanced, acoustically neutral environment around your microphone. This means the SPACE doesn't affect the sound of your favorite microphones, which can happen with imitation reflection filters from other brands. **In the box:** 1x SPACE Reflexion Filter 1x stand assembly hardware 2x sealable sand bags (for supporting your mic stand if it starts to lean - sand not included) 1x mic stand thread adapter
